

JWT Authentication Flow - FastAPI

Step-by-Step Flow

1. Register a User

- POST `/auth/register` with JSON `{ "username: "...", email: "...", password: "..."} }`
- Creates a new user and stores in the database.

2. Login to Get JWT Token

- POST `/auth/login` with JSON `{ "username: "...", password: "..."} }`
- Returns `{ "access_token": "your_jwt_token" }` if successful.

3. Access Protected Routes

- Use JWT token in header: Authorization: `Bearer <your_jwt_token>`
 - GET `/expenses` (List all expenses)
 - POST `/expenses` (Create an expense)
 - PUT `/expenses/{id}` (Update an expense)
 - DELETE `/expenses/{id}` (Delete an expense)

4. Token Verification

- Server verifies JWT token.
- Valid: Proceed with request
- Invalid: 401 Unauthorized

5. Perform CRUD Operations

- Create, read, update, and delete expenses for the authenticated user.
